

Product Potential Analysis Report

Project Name: **Zeroleak**

Report Generated: **2026-06-08 11:45:16**

Product Score	60/100
Target Domain	Generic SaaS Utility (Conf: 70.0%)
Proposed Product	Generic SaaS UtilitySuite Enterprise (Enterprise Software)
Business Potential	Medium

Executive Summary

This analysis report examines the codebase characteristics of **Zeroleak** to determine its technical reusability and potential transformation into a commercially scalable product. Based on code scanning metrics, the project fits best as a **Enterprise Software**. The core logic centers around the **Generic SaaS Utility** domain. With key updates identified in the roadmap, this codebase provides a solid foundation for launch.

Repository Scan Statistics

Metric	Count / Value
Total Files	105
Total Folders	39
Primary Languages Scanned	KTS, PROPERTIES, BAT, PRO, APK, JSON, DM, XML, TFLITE, KT, WEBP, MP3, TOML, JAR
Detected Stack Frameworks	Standard script repository

Detected Modules

User & Workspace Management (Confidence: 75%)

REST API Opportunities

Method	Route Path	Description

Microservice Decomposition

- 1. API Gateway (NGINX / Node.js Proxy)
- 2. Authentication Service (Go / Gin & JWT)
- 3. Generic SaaS Utility Core Service (Python / FastAPI)

Business Opportunity Analysis

Target Market	Indie hackers, developer agencies, and digital product studios.
Potential Customers	Solopreneurs, internal development groups, project architects.
Estimated Market Size	\$190B Global Developer Tools Market
Monetization Model	Open-source core with paid hosting options, API key usage limits, or custom extension licenses.

Value Proposition Highlights

- Extremely clean, modern stack scaffolding.
- Instant JWT session setups.
- Interactive configuration dashboard UI.

Productization Roadmap

- Step 1:** Add OAuth2/JWT secure authentication layers to control endpoint accessibility.
- Step 2:** Implement multi-tenant database partitioning to safely segregate customer records.
- Step 3:** Refactor current inline authorization blocks into standard Middleware guards.
- Step 4:** Integrate billing gateways (e.g. Stripe checkout) for subscription and tier control.
- Step 5:** Set up Docker containers and CI/CD pipelines to build scalable cloud-native micro-clusters.
